

**Lab 3: Basics – Methodology**

---

On BS, you will find two datasets: Wine\_a.csv and Wine\_b.csv, write Python code to address the following questions:

- Q1: Merge the two datasets using the ID before dropping it from the resulting merged data.
- Q2: Remove the duplicates.
- Q3: Remove rows having values NA/NAN and with more than 2 occurrences of NaN's.
- Q4: Apply outlier treatment methods to remove outliers.
